Data Structure Index

1.1 Data Structures

Here are the data structures with brief descriptions:

Chapter 2

File Index

2.1 File List

Here is a list of all documented files with brief descriptions:

Chapter 3

Data Structure Documentation

3.1 hpke_suite_t Struct Reference

Data Fields

- uint16_t kem_id

  Key Encryption Method id.
- uint16_t kdf_id

  Key Derivation Function id.
- uint16_t aead_id

  Authenticated Encryption with Associated Data id.

The documentation for this struct was generated from the following file:

- hpke.h

Chapter 4

File Documentation

4.1 hpke.c File Reference

An OpenSSL-based HPKE implementation following draft-irtf-cfrg-hpke.

```
#include <stddef.h>
#include <stdint.h>
#include <string.h>
#include <openssl/ssl.h>
#include <openssl/rand.h>
#include <openssl/kdf.h>
#include <openssl/evp.h>
#include <openssl/params.h>
#include "hpke.h"
```

Include dependency graph for hpke.c:

4.2 hpke.h File Reference

This has the data structures and prototypes (both internal and external) for an OpenSSL-based HPKE implementation following draft-irtf-cfrg-hpke.

This graph shows which files directly or indirectly include this file:

Data Structures

- struct hpke_suite_t

Macros

- #define HPKE_MAXSIZE (640∗1024)

  640k is more than enough for anyone (using this program:-)
- #define HPKE_MODE_BASE 0

  Base mode (all that we support for now)
- #define HPKE_MODE_PSK 1

  Pre-shared key mode.
- #define HPKE_MODE_AUTH 2

  Authenticated mode.
- #define HPKE_MODE_PSK_AUTH 3

  PSK+authenticated mode.
- #define HPKE_KEM_ID_RESERVED 0x0000

  not used
- #define HPKE_KEM_ID_P256 0x0001

  NIST P-256.
- #define HPKE_KEM_ID_25519 0x0002

  Curve25519.
- #define HPKE_KEM_ID_P521 0x0003

  NIST P-521.
- #define HPKE_KEM_ID_448 0x0004

  Curve448.
- #define HPKE_KDF_ID_RESERVED 0x0000

  not used
- #define HPKE_KDF_ID_HKDF_SHA256 0x0001

  HKDF-SHA256.
- #define HPKE_KDF_ID_HKDF_SHA512 0x0002

  HKDF-SHA512.
- #define HPKE_AEAD_ID_RESERVED 0x0000

  not used
- #define HPKE_AEAD_ID_AES_GCM_128 0x0001

  AES-GCM-128.
- #define HPKE_AEAD_ID_AES_GCM_256 0x0002

  AES-GCM-256.
- #define HPKE_AEAD_ID_CHACHA_POLY1305 0x0003

  Chacha20-Poly1305.
- #define **HPKE_SUITE_DEFAULT** { HPKE_KEM_ID_25519, HPKE_KDF_ID_HKDF_SHA256, HPKE_AE↩ AD_ID_AES_GCM_128 }

Functions

- int hpke_ah_decode (size_t ahlen, const char ∗ah, size_t ∗blen, unsigned char ∗∗buf)

  decode ascii hex to a binary buffer
- int hpke_enc (unsigned int mode, hpke_suite_t suite, size_t publen, unsigned char ∗pub, size_t clearlen, unsigned char ∗clear, size_t aadlen, unsigned char ∗aad, size_t infolen, unsigned char ∗info, size_↩ t ∗senderpublen, unsigned char ∗senderpub, size_t ∗cipherlen, unsigned char ∗cipher)
- int **hpke_dec** (unsigned int mode, hpke_suite_t suite, size_t privlen, unsigned char ∗priv, size_t enclen, unsigned char ∗enc, size_t cipherlen, unsigned char ∗cipher, size_t aadlen, unsigned char ∗aad, size_↩ t ∗clearlen, unsigned char ∗clear)
- int hpke_kg (unsigned int mode, hpke_suite_t suite, size_t ∗publen, unsigned char ∗pub, size_t ∗privlen, unsigned char ∗priv)

  generate a key pair

4.2.1 Detailed Description

This has the data structures and prototypes (both internal and external) for an OpenSSL-based HPKE implementation following draft-irtf-cfrg-hpke.

I plan to use this for my ESNI-enabled OpenSSL build when the time is right, that's: https://github.com/sftcd/openssl)

4.2.2 Function Documentation

4.2.2.1 hpke_ah_decode()

```
int hpke_ah_decode (
            size_t ahlen,
            const char * ah,
            size_t * blen,
            unsigned char ** buf )
```

decode ascii hex to a binary buffer

Parameters

ahlen	is the ascii hex string length
ahstr	is the ascii hex string
blen	is a pointer to the returned binary length
buf	is a pointer to the internally allocated binary buffer

Returns

zero for error, 1 for success

4.2.2.2 hpke_enc()

```
int hpke_enc (
            unsigned int mode,
            hpke_suite_t suite,
            size_t publen,
            unsigned char * pub,
            size_t clearlen,
            unsigned char * clear,
            size_t aadlen,
            unsigned char * aad,
            size_t infolen,
            unsigned char * info,
            size_t * senderpublen,
```

```
            unsigned char * senderpub,
            size_t * cipherlen,
            unsigned char * cipher )
```

< Our error return value - 1 is success

4.2.2.3 hpke_kg()

```
int hpke_kg (
            unsigned int mode,
            hpke_suite_t suite,
            size_t * publen,
            unsigned char * pub,
            size_t * privlen,
            unsigned char * priv )
```

generate a key pair

Parameters

mode	is the mode (currently unused)
suite	is the ciphersuite (currently unused)
publen	is the size of the public key buffer (exact length on output)
pub	is the public value
privlen	is the size of the private key buffer (exact length on output)
priv	is the private key

< Our error return value - 1 is success

4.3 hpkemain.c File Reference

An OpenSSL-based HPKE implementation following draft-irtf-cfrg-hpke.

```
#include <stddef.h>
#include <stdio.h>
#include <stdint.h>
#include <stdlib.h>
#include <string.h>
#include <getopt.h>
#include <ctype.h>
#include <openssl/evp.h>
#include <openssl/ssl.h>
#include "hpke.h"
```

Include dependency graph for hpkemain.c:

Macros

- #define **HPKE_START_SP** "-----BEGIN SENDERPUB-----"
- #define **HPKE_END_SP** "-----END SENDERPUB-----"
- #define **HPKE_START_CP** "-----BEGIN CIPHERTEXT-----"
- #define **HPKE_END_CP** "-----END CIPHERTEXT-----"
- #define **HPKE_START_PUB** "-----BEGIN PUBLIC KEY-----"
- #define **HPKE_END_PUB** "-----END PUBLIC KEY-----"
- #define **FINDLAB**(buf, lab, labptr)

Functions

- int main (int argc, char **argv)

  hey it's main()

4.3.1 Detailed Description

An OpenSSL-based HPKE implementation following draft-irtf-cfrg-hpke.

I plan to use this for my ESNI-enabled OpenSSL build (https://github.com/sftcd/openssl) when the time is right.

4.3.2 Macro Definition Documentation

4.3.2.1 FINDLAB

```
#define FINDLAB(
                buf,
                lab,
                labptr )
```

Value:

```
{ \
            labptr=strstr(buf,lab); \
            if (!labptr) { \
                fprintf(stderr,"Error can't find boundary (%s) in file  %s\n",lab,pfname); \
                return(__LINE__); \
            } \
        }
```

4.3.3 Function Documentation

4.3.3.1 main()

```
int main (
              int argc,
              char ** argv )
```

hey it's main()

< whether we're encrypting (default) or decrypting

< whether we're generating a key pair (default off)

4.4 hpketv.c File Reference

Implementation related to test vectors for HPKE.

4.4.1 Detailed Description

Implementation related to test vectors for HPKE.

This is compiled in if TESTVECTORS is #define'd, otherwise not.

The overall plan with test vectors is to:

- define data structures here to store the test vectors
- have global variables with the actual data
- have a #ifdef'd command line argument to generate/check a test vector
- have #ifdef'd additional parameters to _enc/_dec functions for doing generation/checking

Source for test vectors is: https://raw.githubusercontent.com/cfrg/draft-irtf-cfrg-hpke/master/test
json A copy from 20191126 is are also in this repo in test-vectors.json

4.5 hpketv.h File Reference

Header file related to test vectors for HPKE.

4.5.1 Detailed Description

Header file related to test vectors for HPKE.

This is compiled in if TESTVECTORS is #define'd, otherwise not.

The overall plan with test vectors is to:

- define data structures here to store the test vectors
- have global variables with the actual data
- have a #ifdef'd command line argument to generate/check a test vector
- have #ifdef'd additional parameters to _enc/_dec functions for doing generation/checking

Source for test vectors is: https://raw.githubusercontent.com/cfrg/draft-irtf-cfrg-hpke/master/test
json A copy from 20191126 is are also in this repo in test-vectors.json
